

How to Boil Water

Required:

Water

Pot

Instructions:

Pour water into pot.

Place pot on stove.

Turn on stove, on high.

Sit back and enjoy waiting for the water come to a boil.

Tips:

Take care when selecting a pot. Make certain the pot is large enough to hold all of the water you wish to boil.

We recommend that a lid be used, placed on top of the pot (after the water is in the pot). With the lid on, the water in the pot boils faster.

We recommend that you select a pot that has a handle. This makes it easier to pour the water out, when needed, once it has boiled.

Bonus tip:

If you can find one, use a glass lid. Then you can watch the water as it works its way up to a boil.

Warning:

Boiling water can be dangerous. Take care not to spill it on yourself or anyone else. Boiling water can cause burns.
